Subject: University of Cincinnati - Graduate Program in Medical Physics

June 25, 2009

Update on University of Cincinnati's Medical Physics Program

Dear Colleague:

In December, the University of Cincinnati College of Medicine's Graduate Program in Medical Physics (Radiological Sciences) sent you a poster and letter for prospective students, about the educational opportunities for your undergraduate physics students. **At this time, I'd like to send you the same information for your rising seniors, along with our most recent program newsletter, *The UC Accelerator*, which covers the exciting achievements of our faculty and students over the past academic year.**

The American Association of Medical Physicists (AAPM) website includes extensive information on **careers and educational opportunities in the field:** <http://www.aapm.org/students/prospective.asp>

University of Cincinnati's graduate program in Medical Physics is now accepting applications for Fall 2010 entry. The application deadline is February 15, 2010.

As you make recommendations for graduate studies, **we would be pleased if you would encourage your students to consider UC's medical physics program. We strongly encourage women and minorities to apply, and this program is eager to promote diversity in the field!** Please display the attached poster for your students, and kindly circulate the attached prospective student letter and *The UC Accelerator* to your faculty advisors, and to advanced physics students who will graduate in 2010.

For more information, or for questions about the admissions process, visit:
<http://www.grad.uc.edu/programs/RSMP-MS> and <http://www.ucmedphys.blogspot.com/>.

As your students embark on their careers following college, they face a more uncertain future than students in years past. **The University of Cincinnati provides graduate students with a strong didactic foundation and diverse clinical & research opportunities.** As one of this year's graduates said:

"Coming out of UC's program, I feel I am well equipped for a running start as a clinical medical physicist and have a strong foundation for the American Board of Radiology exam preparation."

Our faculty would be pleased to talk with your undergraduates about this exciting field. Founded in 1959, UC's program is well-established, has a strong clinical emphasis, and is **ideally suited to those**

with a solid academic background and a desire to serve others. Please do not hesitate to contact myself or the program coordinator at the email address or phone number below.

With best wishes as you plan for the upcoming academic year,

Sincerely,

Howard R. Elson, PhD
Director, Graduate Program in Medical Physics
