

Two of the graduating seniors in the Engineering Physics program, **Tom O'Brien** and **Eddie Dickerson** were members of KU's design, build, and fly competition for the AAIA. They helped to design and construct an unmanned, electric powered, radio controlled aircraft and then went to Tucson to compete against other university teams. The plane had to fit in a box and then judging included how long it took to put the plane together before it was ready for flying. It was the first year for a KU team to compete in this event and they were in the top 1/3 of the teams and did pass their preflight certifications.

In the picture, Tom is in the back row on the left and Eddie is in the back row on the right.
